

# LASER CUT STRUCTURES by BRANCHLINE TRAINS

9) Locate the house trim on trim sheet 1. Note that there are two trim pieces for each corner of the house. Apply each section of trim work to the corners of the house as shown above. The trim sections should overlap at each corner.

### Front Porch:

10a) Start building the front porch with the floor section. This tabs into the side wall and the lower wall as shown

10b) Install the trim panel below the deck, then add the front and side porch railings. Note that the floor slots into the side railings.

10c) Add the decorative trim pieces to the top of the front porch as well as the bottom of the side with the railing. Now add the risers for the stairs.

10d) Now add the step treads. These are found on the trim sheet 1 and are held in place with their peel-and-stick backing. Add the porch roof and the two brackets (all found on trim sheet 2) on either side of the side window as shown. Finally, add the roof panel to the side window brackets.
