

11a

Rear Porch:
 11a) The rear porch assembles in the same manner as the front. Start with the porch decking, slotting it into the rear wall.

11b) Now add the backing panels to the porch railings. Note that the design on the side panel is offset so that it centers in the opening when assembled. Install the railings as shown.

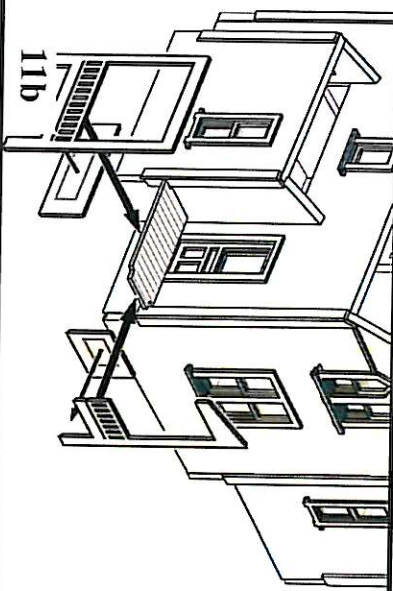

11c) To complete the rear porch add the gingerbread trim strips and finally roof panel R5 as shown.

Sub Roof:

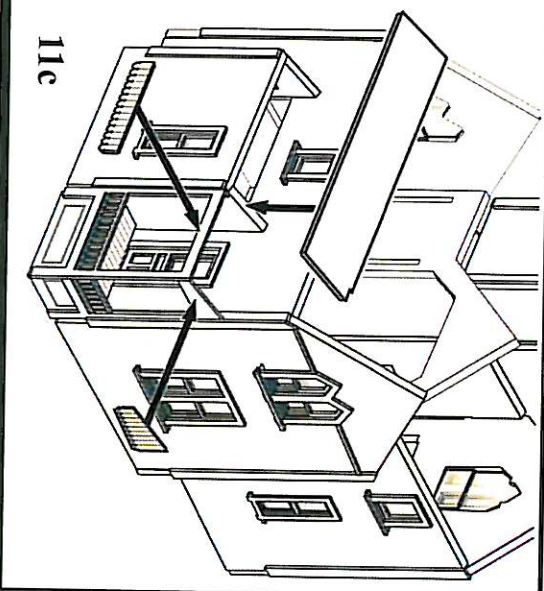

12a-12d) Glue each sub roof panel into place as in diagrams 13a-d. Work in the order shown. Note how the sections overlap.

Tower Roof:

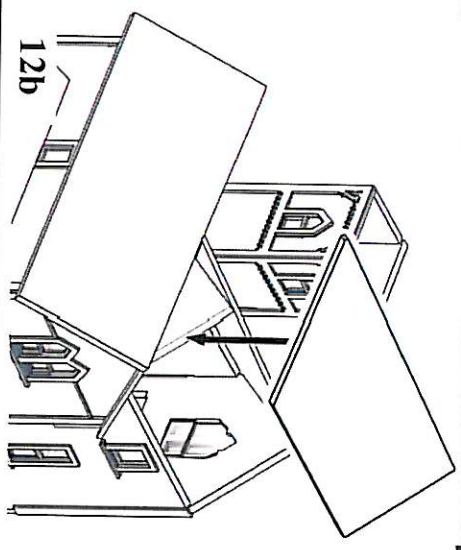

13a) Start by locating the tower sub-roof and brackets on Trim sheet 2. Place the sub roof on your bench with the peel-and-stick side down. Remove the brackets from the sheet one at a time and install on the sub-roof as shown securing them in place using a small dab of white glue.
