

1A

**Constructing the shell:**

1A) Start by gluing the side walls on to the front wall, then glue the rear wall into place. Check that all of the corners are square and set aside to dry.

1B) Referring to the diagram for placement and order, glue the various side walls in place. Start with the walls that tab into the main structure marked "1" on the diagram, then add the walls that tab into them marked "2" and so forth.

**Sub roof panels:**

2) Glue the main sub-roof panel to the top of the house as shown aligning the tabs on the upper walls into the slots on the panel. The side roof panels tab into the main walls and mount onto the tabs on the outer wall sections.

**Upper roof trim and details:**

3) Remove the peel-and-stick backing from the trim panels and press them into place under the sub roof, making sure that the holes in the trim align with the holes in the sides of the house. Once all 4 pieces are installed add the bracket details by carefully trimming these pieces from the sheet and gluing them into the holes using white glue.

**Windows and Doors:**

4) To assemble the windows, first remove the peel-and-stick from the lower sash and apply a section of clear window glazing to it. Now do the same with the upper sash and frame making sure to keep the edge of the glazing flush with the top edge of the frame. Now stick the lower sash into place on the frame. Note that it is possible to position the lower sash in an open position if desired. Now take the window frame and remove the peel-and-stick from it. Center the window sash assembly into the frame and press into place.

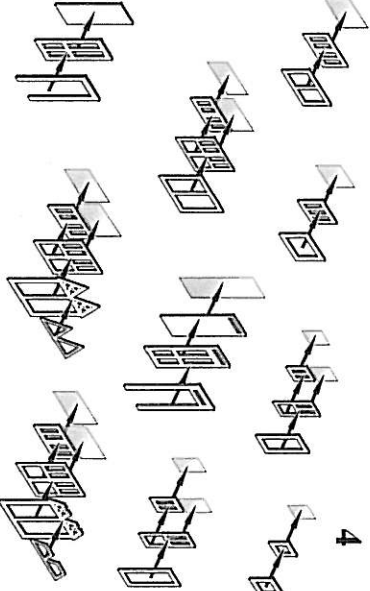

It is best to place the various window assemblies into their openings as they are done. The peel-and-stick on the frame will be more than enough to hold them into place.
