

# LASER-ART STRUCTURES by BRANCHLINE TRAINS

## Constructing the shell:

**1A)** Start construction by gluing the four together as shown. Check to make sure that they are square, then set aside to dry.

**1B)** Now glue the tabs on the two side walls into the slots in the inner support wall. Once these are in place glue the front wall into place.

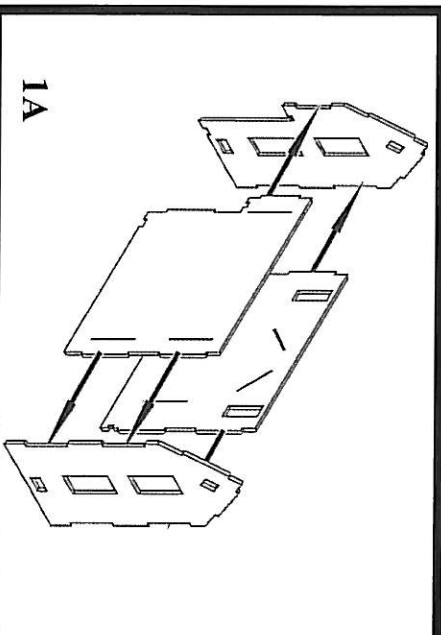

**1C)** Glue the small bay extension wall into place. Next, glue the bay window support into the tab on the bottom of the front wall.

**1D)** Glue the inner window support to the rear of the bay window wall, then glue the front wall to the front of the house as shown.

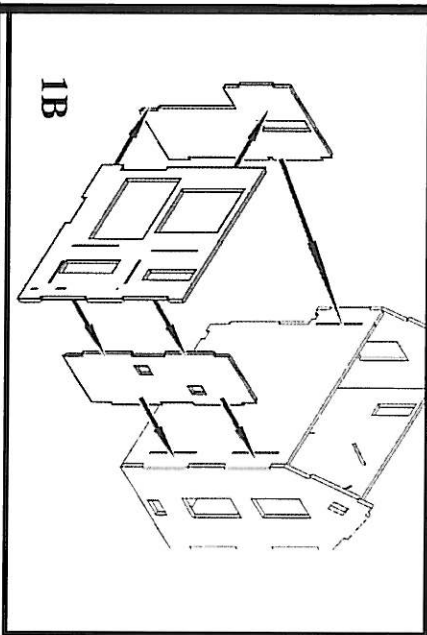

**1E)** Glue the two diagonal bay walls into place as shown.

**1F)** Now glue the two rear extension side walls into place, followed by the back wall. Again, make sure they are square and set aside to dry.

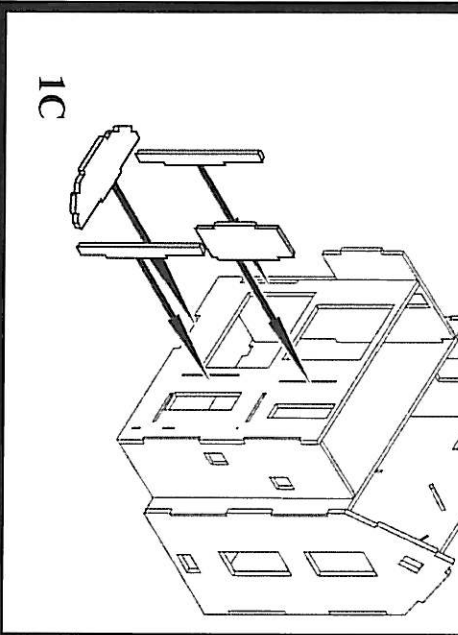

**1G)** Add the angled side wall by first gluing the two small support pieces into the tabs in the side wall. Let them dry. Now glue the wall into place as shown.
