

LASER-ART STRUCTURES by BRANCHLINE TRAINS

A resin chimney has been supplied with your kit and can be located on the back side of the roof. Glue in place using ACC or epoxy.

6b) The stairs are the last part of the assembly process on this kit. These parts are small and fragile so care should be taken in their assembly. Locate the two side stringers on the sub roof sheet and the three steps on the 1/64 trim sheet. Paint the stair stringers the desired then glue into place as shown. Starting with the bottom step, peel the backing from step and place into place on the lowest stair. Note that each edge of the tread overlaps the stringers slightly. Repeat with the other two steps working your way up to the top

We have provided a small step for the side door. Construct this by gluing the front piece of the step to the small side pieces (all found on the sub roof sheet). You can then peel-and-stick decking (found on the 1/64 trim sheet) to the top of the step. Glue the completed assembly underneath the side door as shown.

We will be happy to replace any damaged or missing parts. Please contact our customer service department at (800) 289-4000 ext 242.

Please be sure to reference these part descriptions when asking for replacement parts.
