

**Optional Rear Deck:**

- 7A) To assemble the rear deck tab the four supports together as shown.
- 7B) Now glue the deck floor into place and assemble the two stair assemblies as shown.
- 7C) Glue the completed deck into place, then glue the smaller stairs to the bottom of the doorway. The larger set of stairs will glue to the deck opening.

**Roofing options:**

There are two sheets of roofing included in your kit. This will give you the option of choosing standard shingles or a tar paper type roofing for your kit or kits. Note that the tar paper roofing can be run in either a horizontal or vertical pattern.

8A) Using white glue, you may now begin to add the paper roofing. For the shingles or horizontal roofing paper begin at the bottom of each roof edge, overlapping each row as you go up. If you use the shingles, be sure that you stagger the slots as you do each strip. See illustrations for assistance.

Once in place, paint your roofing the desired color then dry/brush some highlights for a weathering effect. We have found it is easier to weather your paper strips while still on the main sheet.

**Chimney and front stairs:**

9) A resin chimney and front stairway has been supplied with your kit. Paint each before installation. The resin chimney can be applied to the top rear center of each roof by either cutting a hole in the roof or sand the base to the proper angle and attaching it to the roof with cement. Cement the steps to the front of your foundation as shown.

Your kit is now completed and ready for your layout. We hope you've enjoyed this kit. If you have any problems or comments, please contact us at: Branchline Trains, 333 Park Ave., East Hartford, CT. 06108
