13E) Now glue the stair steps to the risers. You will find that using a small pair of will aid in getting the steps into place. Glue the two steps in place starting from the bottom and working your way up.

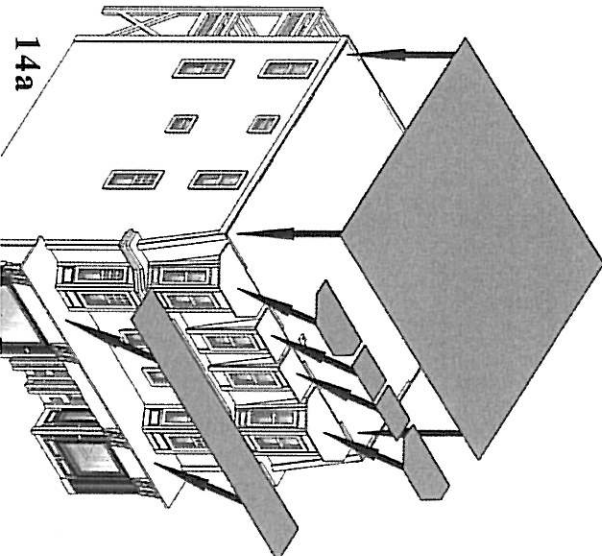

13F) Glue the small rail section into the slot in the back wall of the building on the third floor. Now glue the assembly onto the back of the building using the slots to help locating it and keep in place.

Roofing paper, trim, roof hatch and chimneys:

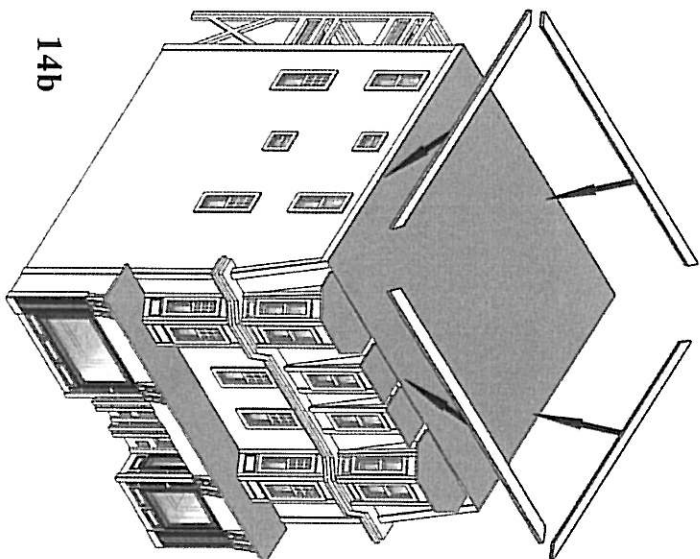

14A) A sheet of black paper has been cut and included with the kit for roofing material. Glue the roofing paper to the tops of each horizontal roof as shown.

14B) Now glue the four sections of trim along the roof edges. These have been angled at the ends to fit together at the corners.

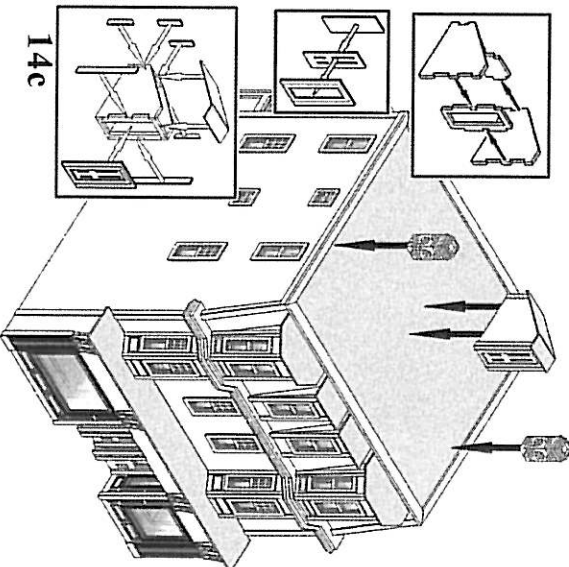

14C) Assemble the stairway area that leads to the roof by first gluing the four walls together as shown. Now assemble and install the door and frame. Next, add the sub roof panel and corner trim.
