

LASER-ART STRUCTURES by BRANCHLINE TRAINS

7) We have provided plastic strips to represent roof caps and flashing. Cut each section to length and glue onto the plastic shingles using plastic cement. The roof can now be painted.

Chimneys:

11) Two resin chimneys have been supplied with your kit. They can be located on the top rear center of each roof. You can either cut a hole in your subroofing and place each chimney inside or sand the proper angle into the bottom of them and attach with cement.

Your kit is now completed and ready for your layout. We hope you've enjoyed this kit. If you have any problems or comments, please contact us at:
