

9A

Side stairs and entryway:

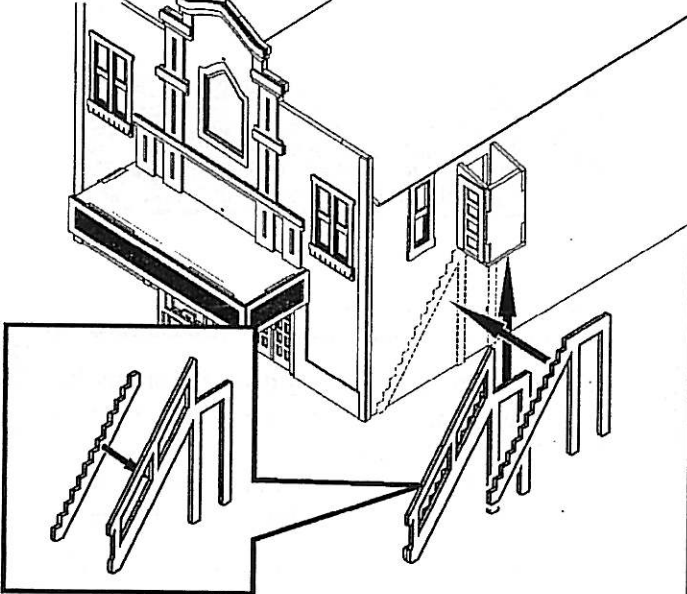

9A) Assemble the upper landing and entryway walls by gluing the three walls together and then gluing them to the floor as shown. Glue the completed assembly into the slots on the side wall. Now assemble the door and place it into the opening.

9B) Glue the other stringer without the railing to the side wall of the theater. Now glue the small stringer to the side support with the railing lining it up along the bottom edge. Now glue this assembly to the underside of the entryway floor as shown.

Apply the peel and stick steps one at a time. You will probably find it easiest to use a pair of tweezers to hold them while you put them in place.

9C) Add the trim work and sub roof to the upper section of the entryway. Now glue the two support braces and into the holes in the side wall and to the stair legs as shown.

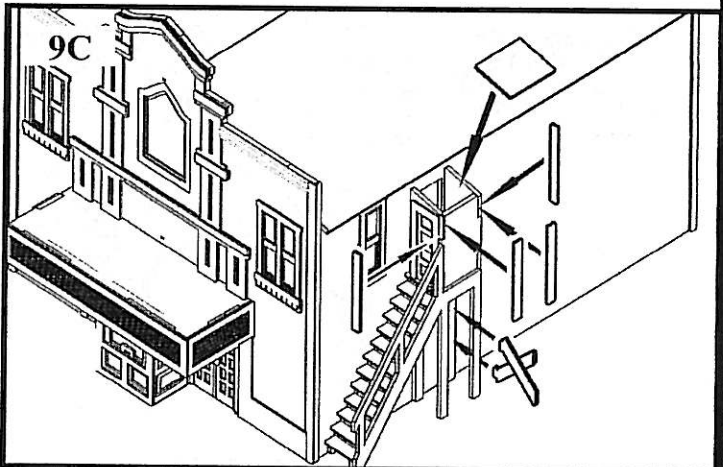

9B - 1

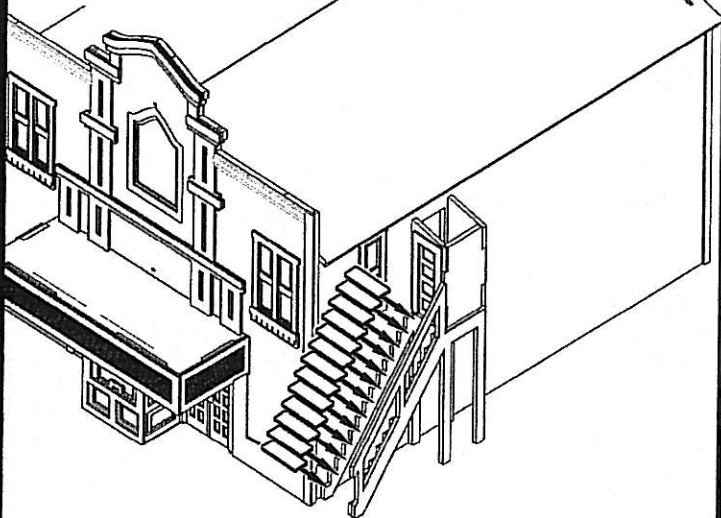

Sign:

10) Start by painting both sides of with the center section before assembly as it will be used for your sign's lettering color. Now take the two outer panels that say "THEATER" and remove the backing from them. Press them onto both sides of the center panel, then add the two outer trim pieces as shown. Glue the completed sign into the two holes in the front wall of the theater.
