

# LASER-ART STRUCTURES by BRANCHLINE TRAINS

5D

out (see diagram).

5D) Glue the completed roof support assembly can blue glued into the slots on the platform and to the upper end wall of the waiting room.

**Sub roof:**

6) Glue the two sections of sub roof in place using the tabs on the end walls of the waiting room to help locate them. Make sure that the scribed sides are facing downward.

Glue the scribed triangular end panel into place on the platform end of the roof as shown.

**Decorative trim:**

7) Install the decorative trim pieces starting with the ends. Remove the backing from the larger trim section and press it onto the ends of the sub roof panels as shown. Now add the smaller trim piece flush with the top edge of the larger piece.

Apply the side trim boards to the ends of the rafters and roof support brackets. Because the surface area of the rafter ends is so small you may want to add a little glue where the trim sections meet the underside of the roof to help hold them in place.

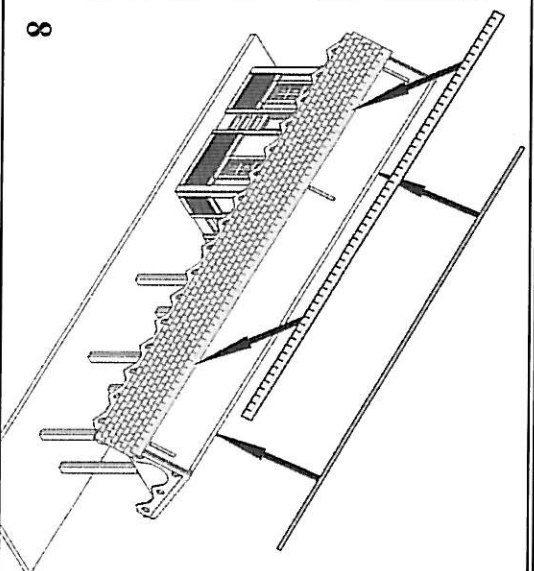

**Roofing shingles:**

8) Add the roofing shingles using white glue. Start at the bottom of each roof edge, gluing each strip of roof paper overlapping the previous row as you go up and staggering the joints between shingles as shown. Cut some strips from the paper sheet and add roof caps to the peak of the roof.

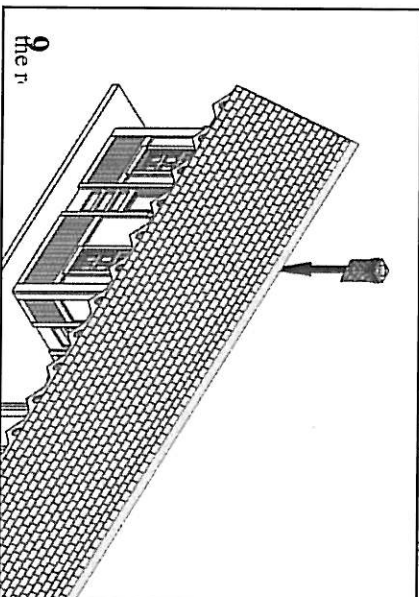

The completed shingles can then be painted and weathered as desired. We like to use a gray paint and dry brush lighter shades of color to pick up the highlights.

**Chimney:**

9) The resin chimney casting can be installed in one of two ways: either sand the bottom edge to match the angle of the roof and cement the chimney to the outside of the roof, or cut a small hole into
