

LASER-ART STRUCTURES by BRANCHLINE TRAINS

5A

Bay Window:

5A) Construct the bay window by first gluing the 3 tabbed mounting pieces into the slots in the stations side wall. The piece with no tabs will mount at the top (see diagram). Now add the lower scribed panels by gluing them into place.

5B) Now assemble the windows and sashes according to the inset diagram. Once the sashes are assembled, attach them to the bay window with their peel-and-stick backing. The trim/frames for the windows should meet tightly at the centers. Two small trim strips are provided if you wish to apply them between the window sections to hide any gaps.

Roof Brackets:

6) There are 7 supports for each side as well as 2 for each end. The end supports differ from the sides in design so make sure you have them separated before hand. The roof brackets glue into the slotted openings on the sides of the station as shown.
