

7B) Now add the rear support, gluing it into the tabs on the center supports, then add the end as shown.

**Platform side panels:**

8) Removing the peel-and-stick backing from each backing from it and pressing it evenly onto the top of the platform. The inner two edges should be flush with the edge of the decking so it will fit tightly up against the building (see the diagram on the back page to see how the platform will fit when finished). The sloped section of decking should be bent downward to match the slope of the ramp.

**Chimney:**

10) The resin chimney can be installed in one of two ways. You can either sand the bottom of the chimney to match the angle of the roof then cement it into place or you can cut a small hole into the roof and mount the chimney into it. Either way, make sure to paint the chimney before installation.

We have included some typical signs to complete your station. Cut these out and glue them into place using white glue.

Your kit is now completed and ready for your layout.. We hope you've enjoyed this kit. If you have any problems or comments, please contact us at:

**Branchline Trains**
