

5B) Now add the two sub roof panels, gluing them to the tabs on the front and rear walls.

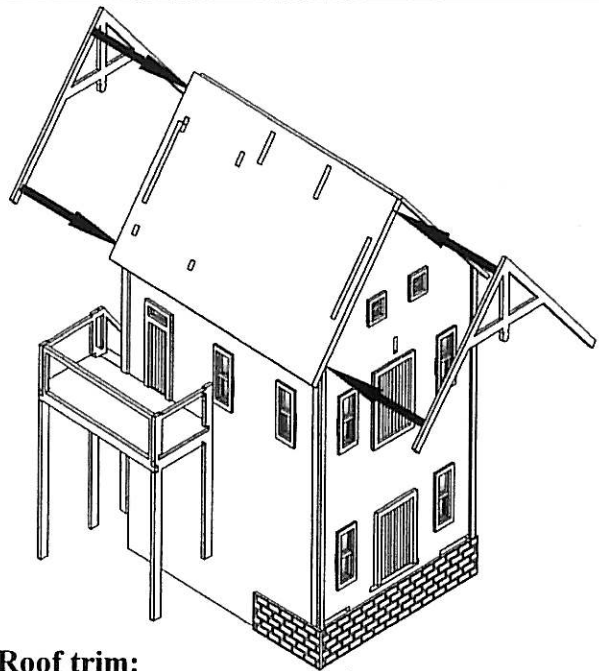

Upper deck.

6A) Glue the upper deck platform into the slot in the side wall, and then apply the front section of the support rail.

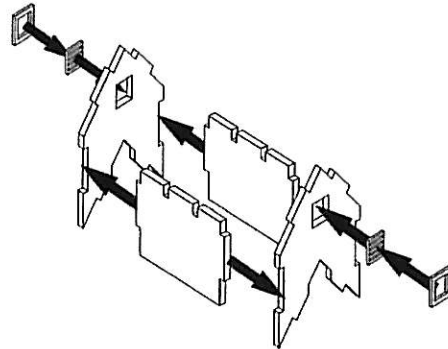

6B) Now assemble the stairs and steps by removing the peel-and-stick backing from the steps and applying them to the stair stringers one at a time. Once assembled, glue the step assembly to the side of the rear rail and the back of the structure. Finally, apply the side railing to the deck, gluing it to the flooring and the sides of the other rails.

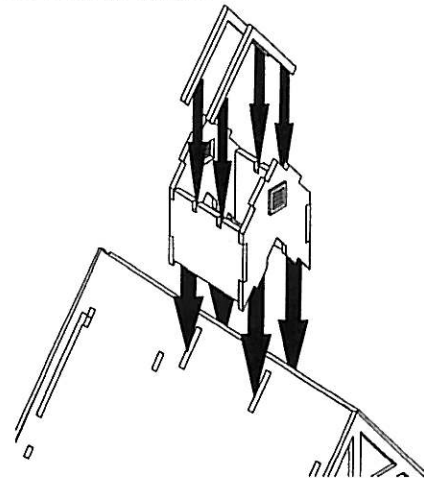

Roof trim:

7) Attach the two sections of roof peak trim to the edges of the sub roof using white glue.

Ventilator:

8A) Glue the four ventilator wall sections together. Construct the two small windows, and then insert them into the end walls as shown.

Glue the ventilator assembly into the slots in the roof. Now add the 2 rafter sections and corner trim.
