

LASER-ART STRUCTURES by BRANCHLINE TRAINS

12

Decals and Signs (continued):

A few typical signs are included to dress up the structure. Cut these from the paper sheet and glue into place using white glue.

Ladders:

12) There are three ladders that mount to the back wall. The two longer ladders mount under the outer doors, the shorter ladder under the center door (see diagram). Remove the peel-and-stick backing from the ladders and apply the small spacer blocks behind the ladders as shown. Now remove the backing from these blocks and apply the ladders to the building.

Coal Chutes:

13) The final detail to add to your structure are the five coal chutes on the front wall. Fold the sides of each chute up along the scribed lines as shown. Now remove the backing from the braces, fold these as you did the chute and apply to the outside of each chute. The completed chutes can now be glued to the front wall below each small coal door. (See the photos on page 6 for placement).

Your kit is now completed and ready for your layout. We hope you've enjoyed this kit. If you have any problems or comments, please contact us at:
